

## Hygienic Design

The ORANKA hygienic design offers you many advantages:

The dispenser tank can be easily protected and unauthorised access prevented through the **patented magnetic locking device**.

With the practical **ORANKA Aroma-Cap** the delicious aroma of the healthy ORANKA branded beverages can be maintained as long as possible.

The **stirring device** is simply placed on the pivot spindle inside the tank and is magnetically driven.

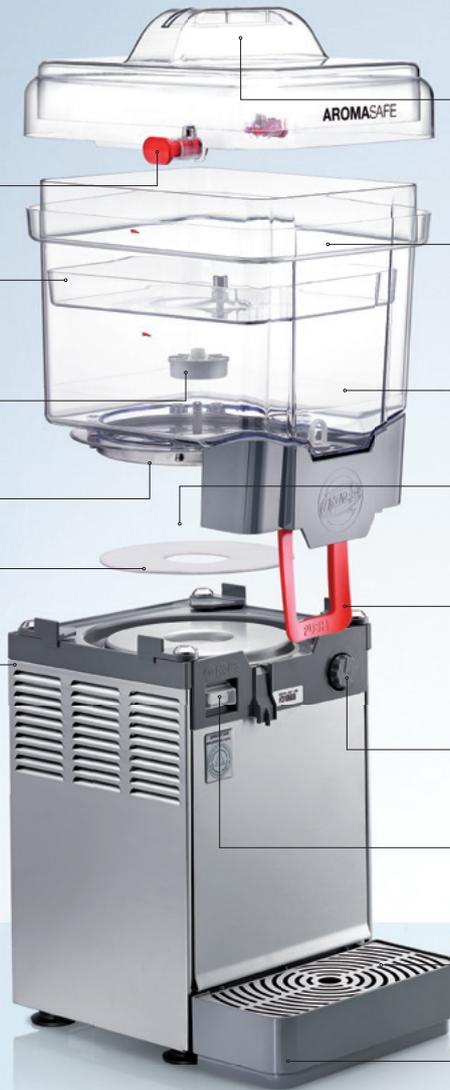

Thanks to the **closed stainless-steel base** you can take off the tank even while it is still full.

The moistened cooling gasket prevents the tank from freezing on to the cooling unit and ensures that the **contents are cooled evenly**.

**Heat build-up is prevented** by the air motor and the air vents which provide **optimum safety**. The device is **protected against moisture**.

### Certified Safety

All ORANKA dispensers have, of course, undergone strict safety inspections in accordance to GS and VDE inspection guidelines and are equipped with electrical cables with stress relief.

On the lid is a **placement slot** for placing the product information sheets. This way you can easily **inform about the contents** of the ORANKA branded beverages.

Thanks to the liquid seal between the ORANKA tank and the lid, the system can be **nearly 100% hermetically sealed**. The air-tight tank enables you to enjoy maximum product freshness and guarantees the **highest quality** possible.

The **good visibility of the beverage** emphasizes the fresh character and stimulates the consumption of the product.

Thanks to the **patented cooling transfer technology**, the dispenser works **particularly energy efficient** and reduces the temperature of the beverage very quickly.

**The dispenser unit**, like all other components of the system, is easily disassembled and cleaned. **The modern design** protects the safety-switch (On/Off) and the thermostat from unauthorized access.

Thanks to the high grade, and steplessly variable, thermostat the beverages are **always kept at the same temperature**.

The robust stainless-steel cooling unit is easy to operate. The **safety switch (On/Off)** and the thermostat are easily accessible on the front side of the dispenser.

The **stainless-steel grating** emphasizes the **premium quality** of the patented ORANKA beverage system.

The **dripping tray** ensures that the area around the dispenser stays clean.
