

The ORANKA beverage system with its closed stainless steel base and liquid air seal provides you through the **lockable tank lid and outlet safeguard** with a means to fully meet the quality and product safety requirements of the German food hygiene regulations.

The patented locking system solely consists of materials that can be hygienically cleaned within the dishwasher.

- ▶ The **tank lid** is locked by two patented safety bolts which can be slid under the edge of the tank once the tank lid has been placed in position. They are being blocked in this position by a magnetic bolt. To open, the magnetic bolt is being pulled up using a "magnetic key". The safety bolts can now be pulled out.
- ▶ The **outlet safeguard** is placed over the outlet from below as far as it will go, with the safety bolt being pushed in between the outlet and the tank. The safety bolt is blocked in this position by a magnetic bolt. To open, the magnetic bolt is being pulled up using a "magnetic key". The safety bolts can now be pulled out.

The Aroma-Safe-System provides a comprehensive degree of safety for the ORANKA brand quality beverages with its safety devices – also outside times of operation!
