

**ORANKA** Fruit Nectar.  
Fruity, healthy enjoyment with **Stevia**.

ORANKA **Fruit Nectar with Stevia**, the name of the innovative, award-winning fruit drink from the wide product range of Wolfgang Jobmann GmbH. Like all other ORANKA fruit drink concentrates, this nectar makes an extremely fruity and refreshing drink – but **with significantly fewer calories than conventional nectars from other manufacturers and a higher fruit content of at least 55 %** (30 to 50 % is standard).

In ORANKA Fruit Nectar with Stevia, the stevia extract replaces 100 % of the conventional mixture of sweeteners. 100 ml of ORANKA Fruit Nectar with Stevia therefore contains only approx. 25 calories. By comparison: a standard nectar sweetened with sugar contains approx. 50 calories per 100 ml. If you want to save even more calories, you can opt for the fruity ORANKA 1+19 Vitamin C and Zinc plus C fruit drink concentrates, which have been awarded the DLG gold medal many times over.

The stevia plant originates from Paraguay and is descended from the same botanical family as the chrysanthemum. It has been cultivated in South America for centuries and is used as a sweetener in food and beverages. The purified extracts from stevia leaves can be up to 350 times sweeter than sugar and are completely calorie-free.

As with extraction of sugar from sugar cane or sugar beet, there is no chemical alteration of the substances, but the steviol glycosides are dissolved out of the dried stevia leaves and purified. This is done as with sugar by repeated crystallisation, until the stevia extract is more than 95 % pure.

Stevia extract, like all sweeteners approved in the EU, has been extensively tested for use in drinks and food and has been found to be completely safe. And just like the classic ORANKA soft drink concentrates, ORANKA Nectar with Stevia contains lots of fruit and no added preservatives, as prescribed by law.
