

The ORANKA beverage system with a sealed stainless steel base and patented refrigeration offers you even higher quality and product reliability with its Aroma-Safe lid with air seal.

Protected by a patented liquid seal, the flavour of the drink can escape is maintained and air from the surrounding area is unable to enter the container. This seal is unique when it comes to cleaning and hygiene: it is made up solely of water! Only when a drink is dispensed is the pressure equalised in a fraction of a second; the volume of drink dispensed is replaced by air flowing in through the liquid seal. This is the equivalent to a virtually complete air seal, as the following example shows:

- ✓ The ORANKA dispenser with a capacity of 10 litres, in other words 50 fruit-filled portions of 0.2 litres each, is filled once a day.
- ✓ In conventional dispensers, the drink is in full contact with the surrounding air for 24 hours (or 86,400 seconds).
- ✓ With the **ORANKA dispenser with Aroma-Safe**, the liquid seal only opens for about 1/2 second after dispensing every other portion, so for a total of approx. 12 seconds.
The **air seal is 99.99 % complete.**

With the additional, innovative flavour cap, the valuable contents remain fresh and the vitamin C level is maintained as long as possible. The principle behind the ORANKA Aroma-Safe system is the same as that of a chilled drinking bottle which is sealed immediately so that it is air-tight.
