

The ORANKA beverage system with its sealed stainless steel base and liquid air seal offers you complete quality and product reliability **thanks to its lockable container lid and dispensing lock.**

The patented locking system is made exclusively from materials that can be cleaned hygienically in a dishwasher.

- ✓ **The container lid** is closed with two patented locking bolts which are pushed under the edge of the container when the lid is in position. They are locked in this position by a locking bolt. When it comes to opening the lid, the magnetic bolt is pulled upwards with a “magnetic key”. The bolts can then be pulled out.
- ✓ **The dispensing lock** is pushed over the outlet from the bottom up to the stop and the locking bolt is pushed between the outlet and container. It is locked in this position by a bolt. When it comes to opening the dispenser, the magnetic bolt is pulled upwards with a “magnetic key”. The bolt can then be pulled out.

**With its protective devices, the Aroma-Safe system offers all-round safety for ORANKA brand drinks – even outside business hours!**

Further fruity information is available at [www.oranka.com](http://www.oranka.com)

**ORANKA. How practical.**

# ORANKA. AROMA SAFE.

The secured system.
